Guzzy Filter Water Bottle

Colors: Black, Blue, Green, Red

25	100	300	600
12.95	12.00	11.25	10.98

- Filter media is made in U.S.A. using NASA technology!
- The charged membrane filter (cmf) contains positively charged particles combined with a very fine (8 micron) powered activated carbon component.
- Our cmf has the ability to remove large quantities of particulate and turbidity down to the nanoparticle range. No other portable filter can perform at this level. It utilizes a new, patented absorption process. The typical granular carbon filter relies solely on an entrapment process. Our cmf is so superior in performance it will quickly relegate the typical granulated carbon filters to history.
- High flow stream with minimal pressure! Others require 2-5 PSI to drink. My Guzzy requires only 1 PSI.
- Up to 120 fill ups or 3 months use!
- Bottle body is dishwasher safe!

Ability to reduce

- Virus 99.9%
- Bacteria 99.9%
- Cysts 99.9%
- VOC's
- Pesticides
- Endocrine inhibitors
- Endotoxins
- Trace pharmaceuticals
- Aox compounds
- Hydrocarbons
- Aluminum, Iron, Copper, Lead

Ability to remove

- Chlorine
- Iodine
- Soluble organics - humic acid compounds
- Some colloidal silica species

Ability to absorb

- Nucleic Acids - DNA
 - RNA and Protein
- Filter replacements available at www.myguzzy.com
